

3.2 – Use Case Testing

Use Case 1 – Emergency Walk-In Urgent Care (Success Path)

Field	Specification
Goal	Handle a walk-in urgent care patient from registration through payment.
Precondition	Patient is not already registered and arrives without a scheduled appointment.
Main Success Steps	1. Patient arrives without an appointment. 2. Receptionist registers the patient. 3. Receptionist schedules an urgent care appointment immediately. 4. Patient checks in. 5. Provider records the diagnosis. 6. Billing creates the bill. 7. Patient pays the bill. 8. Appointment is completed.
Expected Result	Appointment status becomes completed, a medical record is created, and the billing status becomes paid

Use Case 2 – Double-Booking Conflict Resolution (Alternate Path)

Field	Specification
Goal	Prevent scheduling conflicts when two appointments are requested for the same time slot.
Precondition	A scheduled appointment already exists for the requested date and time.
Alternate Flow	1. Receptionist schedules the first appointment. 2. Receptionist attempts to schedule another appointment for the same time. 3. The system detects the scheduling conflict. 4. The conflicting appointment is rejected. 5. The receptionist schedules the second appointment one hour later.
Expected Result	The original appointment remains unchanged, and the second appointment is successfully scheduled at new time
